

Intensive Intervention

An Overview for Parents and Families

National Center on
INTENSIVE INTERVENTION
at the American Institutes for Research®

Are you concerned your child is not making progress in school? Have you noticed your child is not meeting his or her individualized education program (IEP) goals? Is your child acting out or struggling with behavioral problems and motivation? Your child may benefit from intensive intervention.

Who?

Intensive intervention is for students with and without disabilities who are struggling with reading, math, and/or behavior despite receiving high-quality instruction and intervention. For students with disabilities, intensive intervention may be helpful if they are not making progress on their IEP goals.

What?

Intensive intervention is a team-based process that uses student data to help teachers figure out when and how to change and intensify instruction (more practice, feedback, structure, focus) to help students be more successful. In some schools, this may be called Tier 3.

Where?

The intervention is led by a specialist or expert (reading specialist, special educator, math specialist, behavioral specialist, school psychologist, school counselor). The location of the intervention may vary, but intensive intervention often occurs in small groups of one to three students.

When?

Intensive intervention often includes more frequent intervention—more times per week, more minutes per session or day, or more total sessions.

Teachers also need to collect student data more often than with typical instruction. Quick skill checks (less than 5 minutes) may happen daily or weekly so that teachers can learn whether they need to make a change to instruction.

How?

A team of teachers and specialists reviews your child's data to:

- Determine **WHEN** a change should be made to instruction.
- Figure out **HOW** to make that change.
- Develop a **PLAN** that matches the child's needs.

Intensive intervention is not a one-size-fits-all approach or a quick fix. It may take time and multiple data-driven changes before the student makes progress.

Are you a parent or family member of a child with a disability, or do you suspect a disability and need more support?
