Ask Clarifying Questions to Create a Hypothesis to Guide Intervention Changes

Question Bank

Purpose: The team should ask clarifying questions in order to analyze the data and develop a hypothesis to guide future intervention planning (e.g., skill deficit, function of behavior). The following questions may be used to help prompt discussion with your team.

Consider the secondary intervention
- Did the student receive a secondary intervention?
  - Was the secondary intervention evidence-based?
  - Was the secondary intervention an appropriate fit for the student, given skill deficits and/or function of behavior?
  - Was the intervention delivered with fidelity? (Did any factors prevent the student from receiving the intervention as intended?)
  - How frequently and by whom was it delivered?

Consider student needs and background information
- Does the student have an IEP? Is the student an English language learner?
  - If so, be sure the team is aware of the student’s accommodations and present levels of performance.
- Has the teacher communicated with the student’s previous teachers and parents to get a better sense of his/her performance?
- What previous interventions or supports has the student received? How has he/she responded to these interventions or supports?
- Does the data warrant a referral to special education, given the district’s policies?

Consider contributing behavioral factors
- What does the team believe the student is trying to accomplish with the behavior? (What is the function of the behavior?)
  - Avoid or escape something (e.g., difficult task or social interaction)
  - Gain or obtain something (e.g., attention or stimuli)
- Consider the ABC’s
  - Antecedent
  - Behavior
  - Consequence
• Is the student motivated or engaged in the current intervention?
• What motivates or engages the student?

**Consider contributing academic factors**

• What specific skill deficits may be contributing to problem?
• Are the academic tasks on the right level for the student?
• Are progress monitoring data being collected at the appropriate level, or is the assessment too difficult?

**Consider other contributing factors**

• What other factors may be contributing to the problem? (Home life, health, vision, hearing, absences, behavior, etc.)
• Are behavioral and academic struggles related?
• What conditions affect the problem? For instance, does the problem occur in a particular setting or at a certain time of day?
