

Identifying Narrative and Expository Text Structures

College- and Career-Ready Standards Addressed: RL.6.5, 8.5

Analyze how a particular sentence, chapter, scene, or stanza fits into the overall structure of a text and contributes to the development of the theme, setting, or plot.

Objective: Students will learn to differentiate narrative and expository texts.

Materials

- Three narrative short texts and three expository short texts at appropriate instructional level.
- Pencil.
- Paper or notebook.
- Text Structure Cue Sheet (see below).

Suggested Schedule and Group Size

Schedule: Daily, no more than five minutes to 10 minutes per session.

Recommended group size: Small group (four to five students in lower grades; up to 10 students in upper grades).

Note: The following script is intended as a model.

Activity

Intervention Principle

Use precise, explicit language to introduce the lesson and critical concepts.

Deliver new information explicitly and in smaller chunks compared with less intensive instruction.

Ask questions frequently to check for understanding.

Sample Script and Procedures

Today, we'll be learning about text structure, which is something good readers use to help them understand what they read.

Text structure is the organization of text. What is text structure?
(The organization of text)

There are two main categories of text: (1) narrative text, and (2) expository text.

Each time we encounter new text we will decide what type of text—narrative or expository—it is.

What are the two types of text we'll be talking about today?
(Narrative and expository.)

Model think-aloud procedures to demonstrate how to differentiate text types.

Provide a narrative text and an expository text at the students' instructional level.

The purpose of narrative text is to entertain the reader or present a story. Narrative text will often use a text structure that includes a beginning, a middle, and an end of a story. A novel is an example of a narrative text.

What is the purpose of narrative text? *(To entertain the reader or tell a story.) That's right. Narrative text is intended to entertain the reader or tell a story.*

The purpose of expository text is to inform the reader of an event or provide general information. What is the purpose of expository text? *(To inform the reader or provide information.) That's right, expository text informs the reader or provides information. Your science book is an example of an expository text.*

One tricky thing about expository text is that it can use different text structures within one text, so we'll have to watch out for that.

Preview the narrative text with the students. Identify the characteristics of the text to help determine the text type. Have students use paper and pencils to record notes.

Let's look at this narrative text together. Watch and listen as I think out loud and look for the features of a narrative text. First, I'll look to see how the text is organized. When previewing narrative text, I'll look for the following features. Write these on the board:

- a. **Setting**
- b. **Characters**
- c. **Conflict**
- d. **Rising action**
- e. **Climax**
- f. **Falling action**
- g. **Resolution**

Let's preview the narrative text passage together and look for these features.

The narrative text features listed above may or may not be present in the narrative text passage presented to the students. To efficiently locate the features during modeling, preview the text to highlight which features are present and where they are located in the passage.

Now, let's look at the features of the expository text to help us identify how it is organized. When previewing expository text, we should look for the following features to identify it as an expository text. Write these on the board:

- a. **Titles**
- b. **Headings**
- c. **Subheadings**

<p>Use study aides to provide structure for practice.</p>	<ul style="list-style-type: none"> d. Boldface words e. Charts f. Tables g. Diagrams h. Graphics <p>Let’s preview the expository text passage together.</p> <p><i>The expository text features listed above may or may not be present in the expository text passage you present to the students. To efficiently locate the features during modeling, preview the text to highlight which features are present and where they are located in the passage.</i></p>
<p>Allow opportunities for paired practice and provide feedback.</p>	<p><i>Introduce the Text Structure Cue Sheet to serve as a guide for the students to use while they identify text types. Use the cue sheet to review the narrative and expository text purpose, text structures, definitions, and signal words. Let them know they will learn more about the graphic organizers section in another lesson.</i></p> <p>Remember, narrative text structure uses a story structure that includes story elements, such as setting, characteristics, conflict, plot (rising action, climax, falling action), and resolution. Point to items on the cue sheet. Narrative text structures may also be easier to remember because the structure follows a story with a beginning, a middle, and an end.</p> <p>Expository text structures present information to the reader using different structures. Expository text structure may have up to six different subtypes of text structures. We will learn more about those subtypes in another lesson.</p>
<p>Allow opportunities for independent practice and provide immediate feedback.</p>	<p>Now you’ll work with a partner to determine whether the passages I’m about to hand out are narrative or expository passages.</p> <p><i>Group the students in pairs. Hand out the second narrative and expository passages. Provide a few minutes for students to discuss possible text differences. Monitor the students’ discussions and remind them that it is okay to change their initial answers after their conversations with their partners. The teacher might select a few students to share their answers and thinking as a model for the whole class.</i></p> <p><i>Hand out the third narrative and expository passages. Allow the students an opportunity to work independently while providing supportive practice. Ask students to identify the text type of each narrative and expository passage, and prepare students to share why they believe the passages are either narrative or expository. Ask students to use paper and pencils to record the text types and to explain why they think the passages are those particular text types. Monitor the students’ text identification and reasoning and provide error correction instruction, when necessary.</i></p>

Error Correction	
Provide immediate and explicit error correction. Have the students practice the correct responses.	If students make errors, provide immediate corrective feedback so they avoid practicing mistakes. Explain the correct reasoning or evidence for the text type. Note the location of evidence in the passage and provide a think-aloud to illustrate how a good reader will use the information to determine the correct text type. Have students repeat the correct responses.
Instructional Considerations	
	Note on providing feedback: It is recommended that the teacher review the narrative text first because it uses one text structure and will provide a positive practice opportunity. Acknowledge correct student responses, textual evidence cited by the students to identify the text type, and students' reasoning. Provide positive feedback directed at the students' reasoning to recognize their use of text to inform understanding. Remind students to use the text to help support their statements. You might also provide praise or points toward a privilege to reward academic engagement during paired practice and for overall participation.

Text Structure Cue Sheet

This handout should serve as a guide for students as they learn about text structures. Students may reference the two main types of text—narrative and expository—and the common text structure types, definitions, signal words, and graphic organizers used to visually represent the information in the text.

Narrative Text		
Purpose: To entertain the reader or present a story		
Text Structure Type and Definition	Signal Words	Graphic Organizer
Includes story elements or parts, also known as story grammar: <ul style="list-style-type: none"> • Setting • Characters • Conflict • Plot (rising action, climax, falling action) • Resolution 	First So Then Finally At last	Story map

Expository Text		
Purpose: To inform the reader of an event or provide general information		
Text Structure Type and Definition	Signal Words	Graphic Organizer
Cause-effect: How or why an event happened; what resulted from an event	Because Due to Since therefore So that As a result of Consequently	Cause-effect semantic map
Chronology/sequence: The order of events or steps in a process	Afterward Before During Immediately Last Previously	Timeline

Expository Text Purpose: To inform the reader of an event or provide general information		
Text Structure Type and Definition	Signal Words	Graphic Organizer
Compare/contrast: How two or more things are alike or different	As opposed to Both In common In comparison Opposite Similarly	Venn diagram
Description/categorization: How something looks, moves, works; a definition or characterization	Appears to be For example Identify Refers to Such as To illustrate	Web
Problem-solution: What's wrong and how to fix it	Problem Resolution Response Solution To fix the problem	Problem-solution relationship
Position-reason: Why a point or idea should be supported; what's wrong with an idea	As illustrated by Because Consequently For instance For this reason In conclusion	Position-reason flowchart
